Marianjoy Rehabilitation Hospital Wins “20 Most Beautiful Hospitals in America” Award from Soliant Health

Wheaton, IL – Marianjoy Rehabilitation Hospital, part of Northwestern Medicine, has been named one of the “20 Most Beautiful Hospitals in America” by Soliant Health. The hospital’s third year on the list, Marianjoy improved two spots to rank #11 in the country. With 50 hospitals nominated for the honor, the contest was determined by over 100,000 votes by healthcare staff, patients and the community.

“We are honored by the recognition that our hospital’s serene environment and state-of-the-art clinics pair with expert clinical care to provide an excellent patient experience,” said Kathleen Yosko, president of Marianjoy Rehabilitation Hospital, part of Northwestern Medicine. “Those who choose Marianjoy Rehabilitation Hospital find a facility located in a gorgeous setting that is designed to heal the mind, the body and the spirit.”

Situated on a 60-acre wooded campus, Marianjoy provides patients and their families with a high degree of comfort and privacy, while offering beautiful views of nature. On the ground floor, a labyrinth connecting all the buildings offers patients and guests a place of solitude and reflection. Several gardens provide an opportunity for meditation and to experience the healing effect of interacting with nature.

Soliant Health praised the 170,000-square-foot hospital for its “delightful multi-level campus, as well as visually engaging courtyards and walkways. The visual pièce-de-résistance of this facility is a warm-water therapy pool, surrounded by glass walls and ceiling, overlooking a first-of-its-kind rain garden.”

The therapy pool is located within the Marianjoy Assistive Rehabilitation Technology Institute, a building that used to house the original inpatient hospital. In 2014, the space was repurposed and designed to highlight both the art and science of rehabilitation medicine, combining the latest innovations in rehabilitation technology with the caring spirit of the clinicians and therapists who practice there.

Additionally, the Tellabs Center for Neurorehabilitation and Neuroplasticity (TCNN) opened in 2016 and offers 4,800-square feet of treatment space. Designed to expand treatment options for patients with neurological impairments, TCNN contains the latest advancements in technology, including robotic exoskeletons and virtual reality equipment. Large windows embrace the space on all sides, offering tranquil views of nature, while the clean lines, tall ceilings and open concept of the therapy area mimic the feeling of the wide-open spaces that surround the campus.
